

Measuring Range: 6-36%
Resolution: 2% increments
Species Corrections: 1 setting for wood species corrections, Chart included
Calibration Check: The calibration is internally checked and automatically adjusted if necessary
Pins: 2 pair of pins, measuring depth of 3/16" and 7/16" (5,10mm)
Size : pocket-size 2 3/4"x 5"x1" (70x140x25mm)
Weight: 8 ounces (200g), made out of high-impact plastic
Accessories: wrist strap and pouch, on 9V battery and 2 pair of pins

The mini-Ligno E/C has the following features:

- a unique shape that fits comfortably in your hand when measuring
- measuring range of 6-36% wide enough for dry and wet lumber
- bright, easy-to-read LED display
- connection for external cables and electrode -- to check for hidden moisture problems in thick lumber without having to cut the lumber.

For more options see >> Packages with mini-Lignos.

The functionally designed mini-Ligno E/C fits in your hand when measuring and is small enough to carry in a shirt-pocket. The green cap covers the pins during transportation and serves as a handle when pushing the pins into the wood. This unique design allows pushing behind the entire meter to insert the tapered pins easily. Longer pins are stored inside the meter for measuring thicker material. The short pins are ideal for surface or end cut readings and for veneer.

For measurements, push the pins into wood. The unique on-off switch between the pins, turns meter on automatically and bright LED lights instantly indicate moisture percentage.

An easy-to-use, reliable instrument.
